### Aglo Rhododendron

*Rhododendron 'Aglo'*

Height: 3 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 4b

#### Description:

A beautiful broadleaf evergreen shrub featuring light pink flowers in spring and a dense, compact habit, very hardy, interesting fall coloration; absolutely must have well-drained, highly acidic and organic soil, use plenty of peat moss when planting

#### Ornamental Features

Aglo Rhododendron is smothered in stunning clusters of lightly-scented shell pink trumpet-shaped flowers with a red blotch at the ends of the branches in early spring. It has green evergreen foliage. The narrow leaves turn an outstanding purple in the fall, which persists throughout the winter.

#### Landscape Attributes

Aglo Rhododendron is an open multi-stemmed evergreen shrub with a more or less rounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Aglo Rhododendron is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

#### Planting & Growing

Aglo Rhododendron will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It has a low canopy. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

## Garden and Landscape Plant Finder

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.

Aglo Rhododendron makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
