### Yellow Birch

*Betula allegheniensis*

Height: 60 feet

Spread: 50 feet

Sunlight: ○

Hardiness Zone: 2b

#### Description:

A large and spreading tree with a graceful character and consistently ravishing fall color; bark is interesting but not as showy as other birches; best used in larger landscapes

#### Ornamental Features

Yellow Birch has dark green deciduous foliage on a tree with a round habit of growth. The pointy leaves turn an outstanding gold in the fall. The smooth brick red bark adds an interesting dimension to the landscape.

#### Landscape Attributes

Yellow Birch is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Yellow Birch is recommended for the following landscape applications;

- Shade

#### Planting & Growing

Yellow Birch will grow to be about 60 feet tall at maturity, with a spread of 50 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a medium rate, and under ideal conditions can be expected to live for 80 years or more.
